## Chapter 4

**Problem 21.** (a) From Eq. 4-22 (with  $\theta_0 = 0$ ),  $h = (-gt^2)/2$ ,  $h = -45.0\text{m}$

the time of flight is

$$t = \sqrt{\frac{2h}{g}} = \sqrt{\frac{2(45.0\text{ m})}{9.80\text{ m/s}^2}} = 3.03\text{ s.}$$

(b) From (Eq. 4-21)

$$\Delta x = v_0 t = (250\text{ m/s})(3.03\text{ s}) = 758\text{ m.}$$

(c) from Eq.( 4-23 )

$$|v_y| = gt = (9.80\text{ m/s}^2)(3.03\text{ s}) = 29.7\text{ m/s.}$$

**Problem 38.** . (a) from Eq. 4-21

$$t = \frac{\Delta x}{v_x} = \frac{22.0\text{ m}}{(25.0\text{ m/s}) \cos 40.0^\circ} = 1.15\text{ s.}$$

The vertical distance ( from Eq. 4-22 )

$$\Delta y = (v_0 \sin \theta_0)t - \frac{1}{2}gt^2 = (25.0\text{ m/s}) \sin 40.0^\circ(1.15\text{ s}) - \frac{1}{2}(9.80\text{ m/s}^2)(1.15\text{ s})^2 = 12.0\text{ m.}$$

(b)  $v_x = v_0 \cos 40.0^\circ = 19.2\text{ m/s.}$

(c) from ( Eq. 4-23)

$$v_y = v_0 \sin \theta_0 - gt = (25.0\text{ m/s}) \sin 40.0^\circ - (9.80\text{ m/s}^2)(1.15\text{ s}) = 4.80\text{ m/s.}$$

(d) As  $v_y > 0$  when the ball hits the wall, it has not reached the highest point yet.
