## Lab 3 Homework:

Section A:
Write a program to calculate the value of the following equation:

$$\frac{a^5 + 5}{5a}$$

The following is the expected output:

Section B:
Add section A as a method in a class and name it "calculator" where:
1. The constructor give a default number to the variable "a".
2. The vartiable "a" is received from the user and calculated by the method "caculate".
3. The final result is printed by a method called "getnumber";
