## Ohm's Law

## Aim of the experiment

Measuring the currents through different load resistors $\mathrm{R}_{\mathrm{L}}$ as a function of the applied voltage

## Circuit

## Equipment and components

1 Rastered socket panel
1 Resistor $\mathrm{R}_{\mathrm{L} 1}, 10 \mathrm{k} \Omega$
1 Resistor $\mathrm{R}_{\mathrm{L} 2}, 100 \mathrm{k} \Omega$
1 Resistor $\mathrm{R}_{\mathrm{L} 3}, 470 \mathrm{k} \Omega$
1 Low Z instrument
1 high Z instrument
1 D.C. power supply unit
Bridging plugs
Connecting leads

## Conducting the experiment

1. Assemble the measuring circuit.
2. Measure the current for three different resistors $R_{L}$ as a function of the applied voltage (voltage steps of 1 V ), and arrange the measured values in a table. Then draw a graph based on the measured values. Use a high Z instrument when measuring the current.
3. From the graph find the value of the resistor $R_{L}$.

| $\mathrm{U} / \mathrm{V}$ | $\mathrm{I} / \mathrm{mA}$ |  |  |
| :--- | :--- | :--- | :--- |
|  | $10 \mathrm{k} \Omega$ | $100 \mathrm{k} \Omega$ | $470 \mathrm{k} \Omega$ |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |
|  |  |  |  |

Slope $=$
$\mathrm{R}_{\mathrm{L}}=$

## Series Connection of Resistors

## Aim of the experiment

Measurement of the total voltage $U$ and the voltage drops $U_{1}, U_{2}$, and $U_{3}$ across the resistors and the current I flowing through the circuit.

## Circuit

## Equipment and components

1 Rastered socket panel
1 Resistor $\mathrm{R}_{1}, 1 \mathrm{k} \Omega$
1 Resistor $\mathrm{R}_{2}, 5.6 \mathrm{k} \Omega$
1 Resistor $\mathrm{R}_{3}, 10 \mathrm{k} \Omega$
1 Low Z instrument
1 high Z instrument
1 D.C. power supply unit
Bridging plugs
Connecting leads

## Conducting the experiment

1. Assemble the circuit and connect a multi-meter in series for measurement of the current.
2. Adjust $\mathrm{U}_{\mathrm{G}}=10 \mathrm{~V}$. Measure all voltages with the high Z instrument. Then measure, one after the other, the voltage drops $U_{1}, U_{2}$ and $U_{3}$ across the corresponding resistors $\mathrm{R}_{1}, \mathrm{R}_{2}$ and $\mathrm{R}_{3}$.

Total current $\mathrm{I}_{\mathrm{G}}=$

Voltage $\mathrm{U}_{\mathrm{G}}=$

| Resistor | Voltage |
| :---: | :---: |
| $\mathrm{R}_{1}=1 \mathrm{k} \Omega$ |  |
| $\mathrm{R}_{2}=5.6 \mathrm{k} \Omega$ |  |
| $\mathrm{R}_{3}=10 \mathrm{k} \Omega$ |  |

## Exercise

- Calculate the total resistance $\mathrm{R}_{\mathrm{G}}$ from the law of series connection of resistors; $\mathrm{R}_{\mathrm{G}}=\mathrm{R}_{1}+\mathrm{R}_{2}+\mathrm{R}_{3}$.
$\mathrm{R}_{\mathrm{G}}=$
- Calculate the total voltage across the resistors $\mathrm{U}_{\text {total }}=\mathrm{U}_{1}+\mathrm{U}_{2}+\mathrm{U}_{3}$ and compare it with $\mathrm{U}_{\mathrm{G}}$.
$\mathrm{U}_{\text {total }}=$

## Parallel Connection of Resistors

## Aim of the experiment

Measurement of the current $I$ and the voltage $U$ in a circuit and a number of circuit variations.

## Circuit

## Equipment and components

1 Rastered socket panel
1 Resistor $\mathrm{R}_{1}, 10 \mathrm{k} \Omega$
1 Resistor $\mathrm{R}_{2}, 100 \mathrm{k} \Omega$
1 Low Z instrument
1 high Z instrument
1 D.C. power supply unit
Bridging plugs
Connecting leads

## Conducting the experiment

3. Assemble the circuit step by step (the single stages are indicated by dotted lines).
4. Measure the current I and the voltage U as given in the table below.

| Circuit with | $\mathrm{U} / \mathrm{V}$ | $\mathrm{I} / \mathrm{mA}$ | $\mathrm{R} / \mathrm{k} \Omega$ |
| :---: | :---: | :---: | :---: |
| $\mathrm{R}_{1}$ |  |  |  |
| $\mathrm{R}_{2}$ |  |  |  |
| $R_{G}=\frac{R_{1} \times R_{2}}{R_{1}+R_{2}}$ |  |  |  |

## Exercise

- Enter the resistance values into the table for each of the circuits.
- Calculate the total resistance $\mathrm{R}_{\mathrm{G}}$ of the circuit from the law of parallel connection of resistors; $\frac{1}{R_{G}}=\frac{1}{R_{1}}+\frac{1}{R_{2}}$,

$$
R_{G}=\frac{R_{1} \times R_{2}}{R_{1}+R_{2}}
$$

$\mathrm{R}_{\mathrm{G}}=$

- Calculate the total current using $1^{\text {st }}$ law of Kirchhoff: $\mathrm{I}_{\mathrm{G}}=\mathrm{I}_{1}+\mathrm{I}_{2}$.
$\mathrm{I}_{\mathrm{G}}=$
