GEOLINK Office is one of the King Abdulaziz
University Expert Houses.

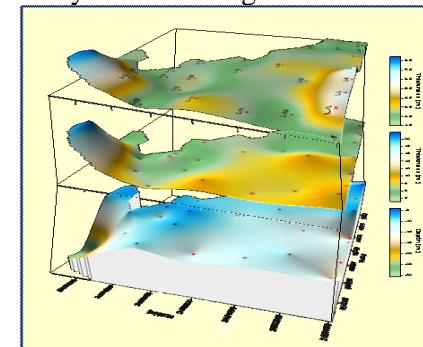

Office Area and Specialization

1. Geophysical and geological studies for groundwater exploration (optimum locations for drilling and well-design).
2. Geophysical and geological studies for mineral resources.
3. Geotechnical geophysical testing.
4. Engineering & environmental geophysical studies.
5. Geological hazards using geophysical and geological methods.
6. Specialized training courses.

The office conducted many studies and consultations in the field of groundwater exploration, mineral resources explorations, engineering & environmental studies and geotechnical investigations. It has also carried out several consultations for various governmental agencies such as King Abdulaziz City for Science and Technology (KACST), other government and private agencies in Makkah area since 2001.

The office uses various geophysical methods (electric, electromagnetic, seismic, magnetic, gravity and GPR) to implement the required job. The office has professional researchers and technicians in different geophysical and geological aspects such as engineering & environmental geophysics, groundwater geophysics, geotechnical geophysics, ...etc. In addition, the office has connection with the Central Laboratories Unit in KAU for analysis and testing.
