Research Title : <u>Novel dyes derived from hydrazones: Part 3. Synthesis and</u>

<u>characterizations of 2-[4-(1-phenylethylidene)hydrazino]</u>

phenylethylene-1,1,2-tricarbonitrile

<u>Novel dyes derived from hydrazones: Part 3. Synthesis and characterizations of 2-[4-(1-phenylethylidene)hydrazino]</u>

phenylethylene-1, 1, 2-tricarbonitrile

Description : Novel tricyanovinyl dyes derived from hydrazones have been

prepared by the reaction of tetracyanoethylene and

phenylethylidene hydrazone, and these dyes showed absorption in the region of 500 nm. The dyes showed pronounced solvatochromic effects as the solvents polarity increased. Some of the new dyes were studied to show their aggregation properties in solution as the concentration changed. Most of the dyes studied showed change in the absorption spectrum and hence the position of the maximum absorption bands. The thermal stability of some of the prepared dyes was studied in poly(methyl methacrylate) film at 80 °C; the substitution on the aromatic group showed less thermal

stability of the dyes.

Research Type : Article Research Year : 2006

Publisher : Dyes and Pigments Volume 71, Issue 2, 2006, Pages 103-108

Supervisor : Abdullah Mohamed Asiri, , Abood A. Bahajaj, Iqbal M.I. Ismail and

N.A. Fatani

Added Date : Sunday, June 01, 2008
