4,5-Dihydro-3a,5a-diazoniapyrene triiodidocuprate(I)
D. Wu, P.-C. Hao, Y.-Y. Niu, S. W. Ng and E. R. T. Tiekink

Abstract: In the dianion of the title salt, (C_{14}H_{12}N_{2})[CuI_{3}], the Cu^{I} atom is coordinated by three I^{-} ions that define a nearly trigonal-planar geometry; the Cu^{I} atom lies 0.1407 (6) Å out of the plane. With the exception of the methylene C atoms, the dication is essentially planar (r.m.s deviation = 0.067 Å). The most significant interaction between the ions is a C-H...I contact.
